

# The TEACH Framework

AI should enhance, not replace, intentional instruction, professional judgment, and district-approved curriculum.

**T**

## Thoroughly Evaluate

Review AI content for accuracy, bias, and grade-level fit. Use professional judgment before anything reaches kids.

**E**

## Engage with Curriculum

Align AI use to your standards, curriculum, and pacing. Support your learning goals and prioritize district-adopted resources.

**A**

## Adhere to Approved Tools

Use only district-approved tools, signed in with your district account: Copilot · Diffit · Khanmigo · MagicSchool.

**C**

## Commit to Safe & Ethical Use

Never enter student PII: names, IEP or 504 details, grades, or photos. Use anonymized prompts. This is the line that does not move.

**H**

## Harness the Potential of AI

Differentiate, boost engagement and accessibility, and build future readiness. Spend the time you save on what only you can do.

### Write a strong prompt

A prompt is just a sentence. Tell AI what you need, in order.

As a **6th-grade science teacher**,  
**create a rubric and directions** for students to  
**build a model of natural hazards**,  
**aligned to NGSS, in three periods**,  
**for a mixed-readiness class**.

#### WHAT EACH COLOR MEANS

| Who      | What     | How         | But         | Why         |
|----------|----------|-------------|-------------|-------------|
| the role | the task | the product | constraints | the context |

### The stoplight, in one glance

- Green, go:** lesson ideas, leveling, rubrics, exit tickets, rewording directions.
- Yellow, judgment:** AI-built lessons, assessments, and feedback. Apply T and E first.
- Red, never:** student PII, rosters or grades, IEPs, and any unapproved tool.

**Sharpen it:** good, better, best. Each pass adds context, standards, and the final product, and lands closer to what you pictured.
