

The TEACH Framework

AI should enhance, not replace, intentional instruction, professional judgment, and district-approved curriculum.

Thoroughly Evaluate

Review all AI-generated content for accuracy, bias, and appropriateness.

Ensure materials align to grade level and student needs.

Use professional judgment before using anything with students.

Engage with Curriculum

Align AI use to standards, curriculum, and pacing guides.

Support your learning intentions and success criteria.

Prioritize district-adopted instructional resources.

Adhere to Approved Tools

Approved tools meet privacy, security, and compliance standards.

They protect student data and PII far more completely than public tools.

Commit to Safe & Ethical Use

Never enter student PII: names, IEP or 504 details, grades, or photos.

Use anonymized prompts. Describe the student, never name them.

Follow FERPA and WCSD policy.

Harness the Potential of AI

Differentiate instruction to meet diverse learner needs.

Increase engagement, creativity, and accessibility for all students.

Support college, career, and future readiness.

HUMAN AGENCY SCALE

Agency means how much of the thinking stays with you. This scale says **when** to lean on AI; the stoplight below says **what** is allowed.

1 Fully Human

You do the work. The right call when the thinking is the point.

2 Human-Led, AI Support

AI brainstorms and drafts; you direct and decide. Most teacher work lives here.

3 AI-Led, Human-Reviewed

AI produces near-final work; you inspect every line before it counts.

4 Fully AI: not allowed

Not allowed. If you didn't review it, it doesn't represent you.

THE STOPLIGHT, IN ONE GLANCE

Green, go:

lesson ideas, leveling texts, rubrics, exit tickets, rewording directions, sub plans.

Yellow, judgment:

AI-built lessons, assessments, and feedback drafts. Strip names, apply T and E first.

Red, never:

student PII, rosters or grades, IEP decisions, and any unapproved tool.
